16*16mm Neon

- Silicone led neon light,top view,16*16mm
- Light source: High luminous efficiency, LM80 proved; High light transmittance, environmental silicone material,IP68;
- IK10,Resistance to saline solutions, acids & alkali,corrosive gases and UV;
- OEM ODM is acceptable

Note: 1、 Considering the waterproof performance of the light strip, it is not recommended that customers cut it by themselves. The length can be customized in multiples of 50MM
 2、 Due to the nature of blended modified polymer products, the length of the light strip may vary by $\pm 15\text{mm}$ at both ends.

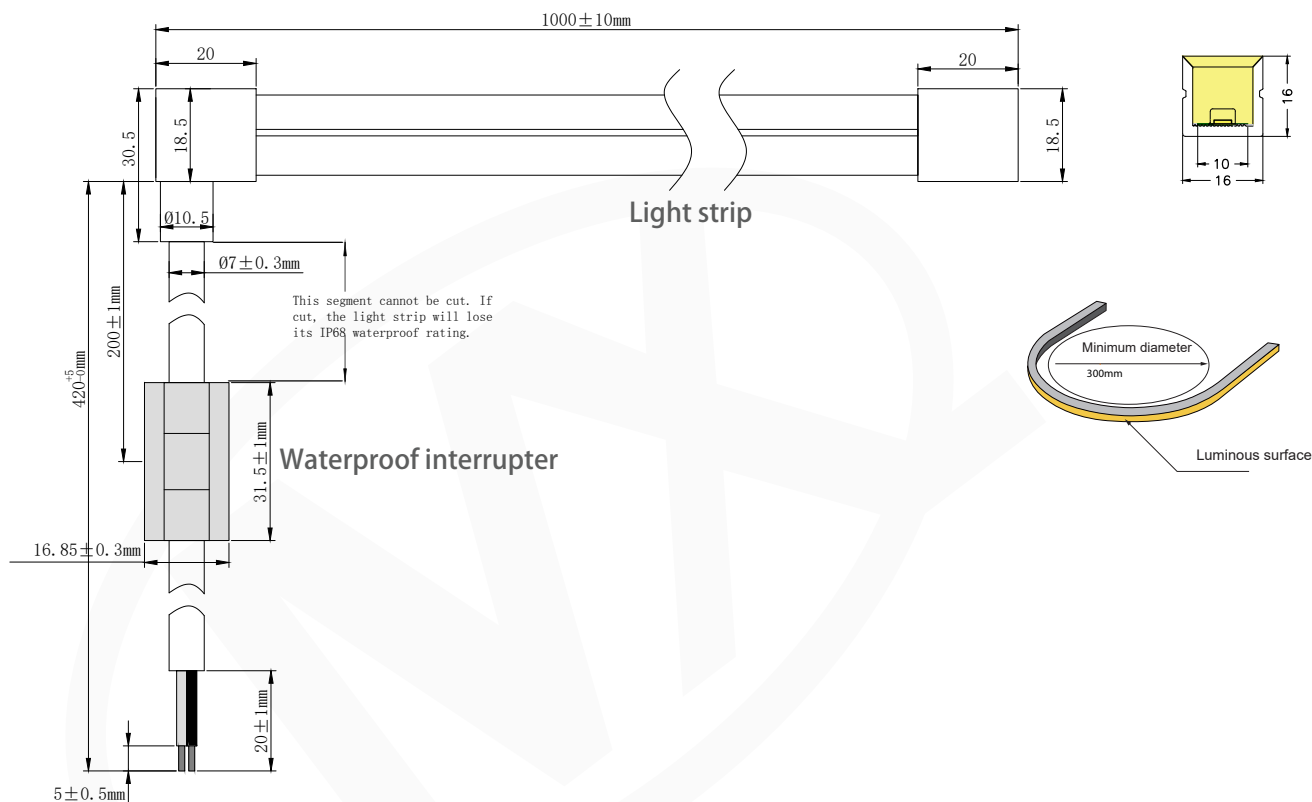

Optical parameter

LED Type:	SMD2835
Color Rendering Index:	>90
CCT Range:	2700-6500K
Irritation Angle:	120°
Light Efficiency:	59-66Lm/w
Lumen Output/meter:	594~660Lm/m (181~201Lm/ft)
IK/IP Grade:	IK10/IP68

Electric parameter

Input Current/m:	0.42(max)A/m(0.13A/ft)
Input Voltage:	DC24V
Power/M:	10W/m(3W/ft)
Static Electricity:	1000V (ESD)
LEDs/Meter:	140LEDs/m
Product Length:	Customized in units of 50mm
LEDs of Section	7LEDs

Safety Information

Application notes for led flexible strip

In order to drive LED flexible strip lights safely, it is absolutely necessary to operate them with an electronically stabilised power supply protecting against short circuits, overload and overheating.

To also ease the luminaire/installation approval, electronic control gear, power supply and all electronic accessories for LED or LED modules should carry "CE, or UL" mark and meet the latest safety standard.

- Please use 24VDC isolated power supply to drive the led strip, and the constant voltage source ripple less than 5%. Can't step-down the power by resistance-capacitance and non-isolated power supply driver led strip, etc.
- To ensure the longevity and reliability of the strips, please do not bend the arc diameter 300mm or less, do not fold to avoid damaging the lamp beads or broken.
- To ensure the life and environment of lights, in the use of force can not pull the power cord to avoid damage to prohibit collision LED lights.
- During the installation of positive and negative attention to the power cord, do not pick the wrong voltage power supply and the product are the same, so as to avoid damage to the product.
- LED lights should be stored in dry sealed environment, the proposed storage period should not be too long before using unpacking, the working temperature: $-20 \sim +45$, Storage temperature: $-0 \sim +60$, not waterproof lights band indoor use, relative humidity not higher than 70%.
- In practical applications, the power supply should leave 20% margin (recommend using only 80% of the power) in order to ensure a sufficient amount of voltage drive products
- Do not use any acidic, alkaline adhesive securement products (including not limited to glass, plastic, etc.)
